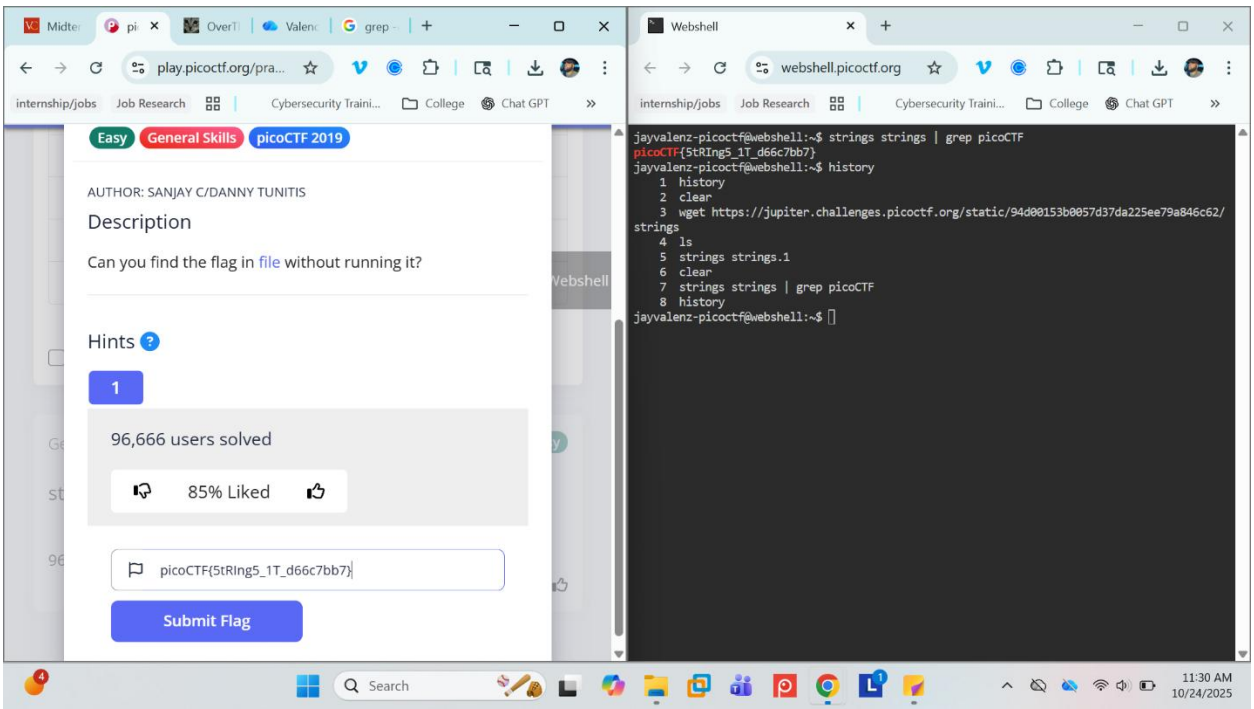
Instructions

PicoCTF is another CTF you can check out for free. This one is put on by Carnegie Mellon University. You can access the CTF at [www.picoctf.org.](http://www.picoctf.org) - from there, you can check out the GYM and upcoming competitions. The GYM has challenges from old competitions.

The following challenges are taken from the GYM - you can add your answers once you have them to the GYM in addition to your assignment.

FOR ALL assignments, take screenshots. If the command line is used, also take a screenshot of the command line history.

Challenge 1: Strings IT

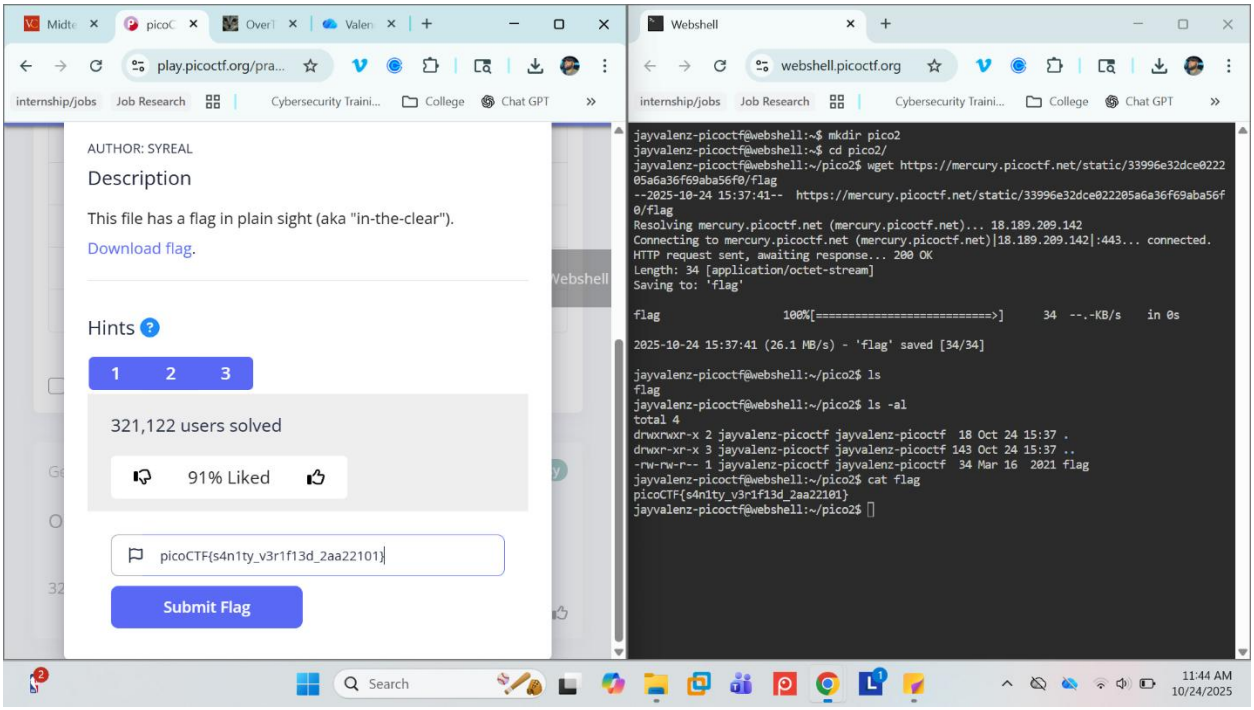


Note: command used ***strings strings.1 | grep picoCTF***

I used the ***strings*** command to identify the pattern, plus the tip said *strings,* so I used ***strings strings.1***

I used ***grep*** to find the specific phrase ***picoCTF.***

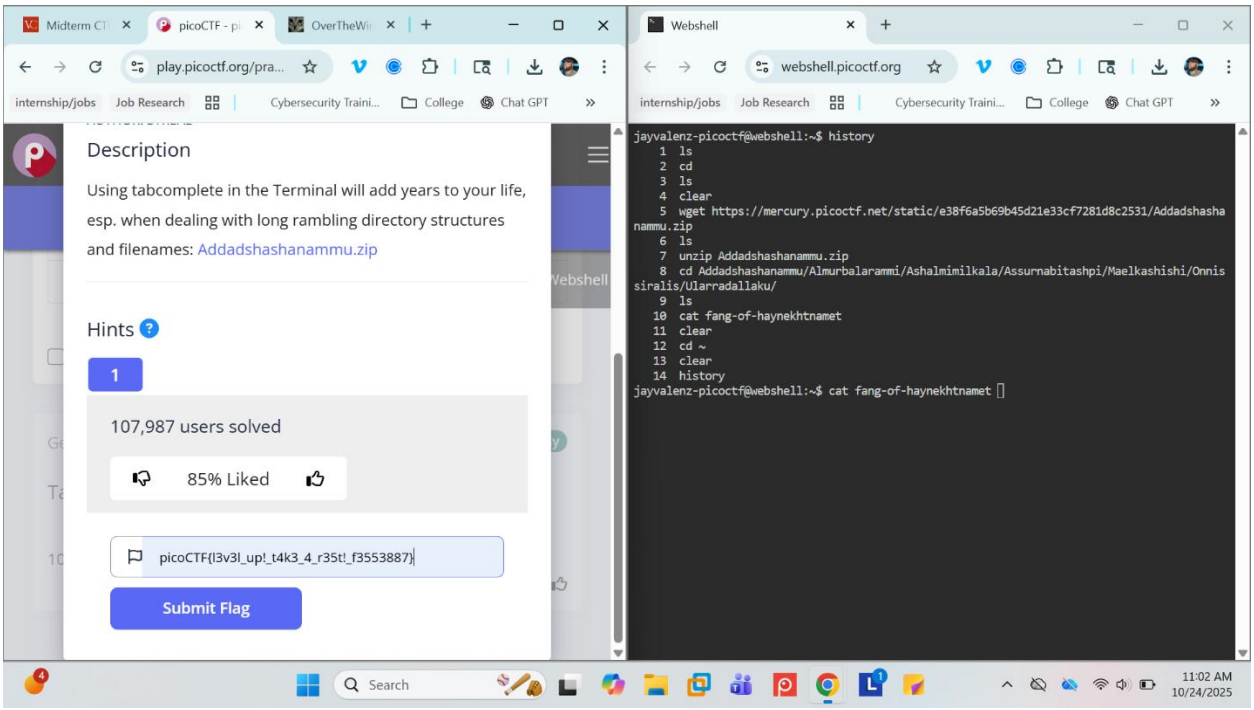
Challenge 2: Obedient Cat



Note: command used ***cat flag***

I used command ***ls -al*** to list all files including hidden files and then I used ***cat flag*** to view the file.

Challenge 3: Tab, Tab, Attack



Note: command ***cat fang-of-haynekhtnamet***

I first download the file, unzipped the file, then I went to the file relative path and opened it.
